

**When Teamwork  
Really Matters.**

# INTEGRATED COMPONENTS

## Precision

Homebuilders depend on us to provide them with a quality product that fully integrates together. We use computer-aided design and a state of the art, laser-guided manufacturing process. Our trusses and wall panels are 20 percent more efficient than stick-built, with far less material to clean up at the jobsite, this means fewer dumpster pulls which reduces time and adds savings all around. Our process is certified through the SBCA In-Plant Wood Truss QC Program and we guarantee compliance with IRC and local building codes. Annandale Millwork and Allied Systems is a proven trusted building partner.

Innovation in building  
**since 1952.**

## Trusses and Panels...

We started with wall panels in 1990. The software and equipment were more than challenging. Truss software was ahead of panels so we did this a little backwards. The construction for walls was almost all done by hand. Take offs were linear footage and the members were hand measured, cut, stood up and nailed into place. One of our largest customers at the time convinced us to invest in our first truss table in 2003. Construction software was new and difficult to translate but we pressed on. We knew that bringing all the separate pieces into an integrated whole would make the construction not only faster but would be a better end product than conventional stick building could produce.
